

1 **ABSTRACT OF THE DISCLOSURE**

2 A safety clasp knife is composed of a blade pivotally received in the handle
3 including a top cover and a bottom cover. The blade is defined with a through hole, a
4 first limiting notch in communication with the through hole and a second limiting notch
5 in communication with the through hole and opposite to the first limiting notch such that
6 a spring-driven positioning rod which is movably received in the handle is able to
7 alternatively be received and limited in the first limiting notch and the second limiting
8 notch to allow the blade to extend out of the handle or be received in the handle.
